**Refurbishing a small works?
Renewing a reed bed?
Sloughing Problems?**

**Need a proven means of protecting your suspended solids
consent while the work is carried out?**

**The WPL MicroScreen is the ideal temporary
or permanent solution!**

Final Effluent Compliance Solutions

The WPL MicroScreen is the perfect solution for tertiary treatment of effluent containing excess suspended solids. The unit operates using a pumped or gravity influent feed. The unique design of the drum filter maximises the surface area of the filtration cloth to achieve high removal efficiency with minimal investment and operating costs. The effluent which has passed through the filter is discharged using gravity and any screenings collected are pumped away to the treatment processes upstream.

WPL currently has a Hire fleet of skid mounted units which are available for short or extended hire periods and can be purchased at the end of the hire period comprising:

Qty 10 5 BMF 10 units
Qty 4 10 BMF 10 units

The complete range of WPL MicroScreens are available to handle flows ranging from 3 l/s to 200 l/s and have been permanently installed at more than 30 locations throughout the UK with the following Water Plc's:

**Southern Water
Yorkshire Water
Wessex Water
South West Water
Anglian Water
Welsh Water**
